SUMMARY

Data engineer with 6 years of experience designing and maintaining large-scale ETL pipelines, relational database systems, and data warehousing solutions. Strong background in MySQL, SQL, and Python with expertise in data quality, pipeline reliability, and cross-team collaboration.

EXPERIENCE

Senior Data Engineer | CloudPeak Data Solutions

Feb 2021 – Present

- Architected and maintained 14 production ETL pipelines in Python ingesting data from 20+ vendor APIs, internal microservices, and flat-file sources into a centralized MySQL data warehouse.
- Optimized critical MySQL queries and indexing strategies, reducing nightly batch processing runtime from 6.5 hours to 47 minutes across a 400M-record database.
- Designed a Python-based data validation framework that catches schema violations and null-value anomalies before they reach downstream consumers, reducing data incidents by 78%.
- Wrote Python automation scripts for database backup, monitoring, and alerting, replacing manual DBA tasks and achieving 99.95% uptime SLA.
- Collaborated with analytics and BI teams to design MySQL schemas that support flexible reporting queries without full-table scans.
- Led a data quality initiative that standardized naming conventions, documentation, and SLA tracking across 30+ data assets in the warehouse.
- Managed Git repositories for all pipeline code, enforcing code review standards and maintaining test coverage above 85% across ETL modules.

Database Developer | Frontrange Systems Inc.

Sep 2018 – Jan 2021

- Built and maintained relational database schemas in MySQL supporting a B2B SaaS platform with 800+ enterprise clients and 50M+ monthly transactions.
- Developed Python ETL scripts to migrate 120M historical records from a legacy flat-file system into the MySQL warehouse with zero data loss and full audit logging.
- Wrote SQL stored procedures, views, and triggers to enforce business rules and automate data transformation logic within the database layer.
- Created Git-versioned SQL migration scripts for all schema changes, enabling repeatable, rollback-capable deployments across development, staging, and production environments.
- Collaborated with backend engineers to tune MySQL query execution plans, identifying and resolving N+1 query patterns that were causing API response times of 8+ seconds.

Junior Data Analyst | Mesa Analytics

Jun 2017 – Aug 2018

- Supported senior data engineers by writing SQL extraction queries and Python data cleaning scripts for weekly client deliverables.
- Maintained documentation for 25+ ETL processes and created onboarding guides for new team members.
- Built Excel-based dashboards for client reporting, reducing manual formatting time by 3 hours per weekly deliverable.

EDUCATION

B.S. Information Systems | Colorado State University | 2017

TECHNICAL SKILLS: MySQL | SQL | Python | Git | ETL Pipeline Design | Data Warehousing | Bash Scripting | Linux | AWS S3 | Agile | Data Quality | Documentation
